

Non-invasive, clinical-grade
Remote Patient Monitoring

Why the Alio platform may be right for you

Remote patient monitoring reimagined - **spend more time living your life, less time worrying about your condition.**

We understand that managing a long-term illness can be difficult and make it hard to stick to your daily routine. Patients with End-Stage Kidney Disease (ESKD) have trouble keeping track of their health and vitals when they are not at the dialysis clinic or seeing their doctor.

Our platform is a tool that helps your doctor check your health remotely without causing any discomfort. We use a small, non-invasive patch called the SmartPatch to give you and your family peace of mind.

The Alio tool collects important health information (like your vitals) that doctors need to take care of you.

How it works – Our Technology

The Alio platform helps people who are at risk for health problems by giving doctors important information about their blood and vital signs. This is especially helpful for people who need dialysis. With this information, doctors can take action quickly and at a lower cost to help you stay healthy.

The Alio platform is powered by the SmartPatch, Hub, & Portal

The Alio® SmartPatch

Collects important information to help take care of you without causing any discomfort

The Alio® Hub

Keeps you wirelessly connected to your care team

The Alio® Portal

Provides notifications & delivers actionable clinical insights about your health

ONE wireless patch gathers multiple metrics:

Hemoglobin,
Hematocrit

Potassium
Indicator

Skin
Temperature

Auscultation,
Heart Rate

FDA cleared & study-proven outcomes you can trust

We're grateful that you've chosen us to help take care of you. Your safety and health are our top priority. Our SmartPatch was made specifically for people like you and has been tested in a number of studies around the world with trusted partners.

15+
clinical studies

worldwide

Making better quality of life possible

At Alio, we think **better care is possible**. We want to reduce the number of times you have to go to the hospital, make monitoring less painful, collect more accurate data, and most of all, help you feel more in control and less worried.

Accurate

- The Alio platform can tell if your potassium (K+) levels are too high or too low - 81% accuracy for high levels, and 82% accuracy for low levels.
- FDA clearance of the Alio platform means the tool works as well as existing clinical tools. This includes tools used to check your hematocrit (Hct) and hemoglobin (Hb) without needing to take a blood sample.
- Alio's SmartPatch is better at measuring your heart rate than smart watches and fitness trackers you might be using.

Inclusive

Alio technology was tested across a wide variety of skin colors.

Insightful

Most doctors only do blood tests once or twice a month whereas Alio's SmartPatch checks your vitals (without blood) every three hours.*

*Wearing the Alio® SmartPatch is not intended to replace your regular blood draws.

Your safety

Data Security

Keeping your information safe is important to us. The bluetooth technology we use to connect your device is secure. We also make sure our platform is compliant with all laws and regulations.

Access Safe

We know how important it is to protect your access site. The Alio SmartPatch is safe to apply to your access and will not interfere with your regular dialysis treatments.

Shower Safe

Patients often tell us they forgot they were wearing their SmartPatch. It was designed with your day-to-day experience in mind. The Alio SmartPatch is safe to wear during your daily activities including showering. It is not intended to be fully submerged in water.

Clinician Endorsed

”

Alio's SmartPatch is disrupting dialysis patient care by translating intuitive medicine to precision medicine – this will become the standard of care.

Dr. Rajesh Sivaprakasam

Transplant and Dialysis Access Surgeon
BARTS Health NHS Trust

”

If I had a magic wand for my dialysis patients, I'd wish for a product like the one you [Alio] are working on... we could collect physiological data in clinical & non-clinical settings.

Gail Dewald

Renal RN, Consultant
